## Report on

### *Study of local economically important plant (Guava)*

One of the economically important fruit crop is Guava at Baruipur area of South 24 Parganas. A group of students went for a survey at Suryapur area and visited different fields, have talk with the farmers and gathered experience about the cultivation techniques, application of fertilizers and pesticides, method of irrigation, process of maximum branching generation, management of field and crop, harvesting techniques etc . They also got idea of investment amount and profit. The risk factors of the cultivation were also discussed with the students.

This survey helped them to have a gross idea of self employment who wants to start agribusiness as a main or parallel carrier.
